Service Description - Standard Plan

Feature	Description
Customer User	A cidaas Customer User provides the possibility to manage information about a user, the authentication procedures and permissions.
Deduplication / Identity Linking	The cidaas Identity Linking allows to link different identities of a user, e.g. from two different social providers or two already registered user accounts.
Advanced Multi-Factor-Authentication	Multi-factor authentication (MFA), also known as two-factor authentication (2FA), has become one of the most important tools for protecting data.
JWE	JWE (JSON Web Encryption) - is a standard for encrypting JWT.
Login Provider	cidaas enables the integration of various other Identity Providers (IDP). We call these "Login Providers". This allows a person to authenticate or register with his/her user identity from another system in cidaas - and therewith in your applications.
Hosted Pages	cidaas enables with the Hosted Pages concept the customizing of different user interfaces, e.g. the login UI.
Advanced Webhooks	Contains all important events and webhooks from cidaas.
Consent Page	cidaas offers an advanced and GDPR compliant consent management, which provides the possibility to collect consent during login, registration, progressive profiling or based on actions. Users can accept or reject privacy policies, or terms and conditions directly during registration. In the user profile, users can revisit their consents at any time and edit them if necessary (consent/revocation). https://docs.cidaas.com/docs/cidaas-iam/01dcb43dd176a-consents-and-consent-groups
Apps	A cidaas app represents an OAuth2/OIDC client and is an integration to an application. - OAuth Specification: https:/datatracker.ietf.org/doc/html/rfc6749 - OpenID Connect: https:/openid.net/connect/
Silver Support 1x	On 5 days a week the response time is 8 hours.
