

Service Description – cidaas ID validator

The cidaas ID validator automatically verifies official identity documents, reads the data contained in them, and returns the verification result to the calling application. It can be used as a standalone service or integrated directly into the registration and login processes of cidaas.

Scope of Services

Feature	Description
Document Verification	Capture of the identity document, automated verification of security and authenticity features, extraction of the document data, and return of the verification result in structured form.
Integration	Provision of the service via the cidaas interfaces and integration into the processes of the cidaas platform.
Administration and Evaluation	Configuration of the service and evaluation of the Ident Validations performed via the cidaas Admin Dashboard.
Operation and Support	Hosting, operation, and maintenance of the service in data centers within the EU as well as support via ticketing system and email.

[To be confirmed by Product Management before approval: supported document types and issuing countries, NFC chip reading, facial matching, and liveness detection.]

Feature	Description
Ident Validation	A verification process that is completed with a verification result. A verification result also exists if the verification document is assessed as not authentic or unusable. Processes that are terminated before a verification result is returned or that cannot be carried out for technical reasons are not charged.
Verification Result	The service's response to an Ident Validation, including the extracted document data and the assessment of the verified features.

Scope Limitation

The cidaas ID validator is a technical verification service. It does not constitute identification within the meaning of regulatory requirements, in particular identification pursuant to the German Anti-Money Laundering Act (Geldwäschegesetz) or a qualified trust service with the meaning of Regulation (EU) No 910/2014. The obligation is to perform the verification, not to provide a specific verification result or achieve a specific detection rate. The customer is responsible for the assessment and use of the verification result.

Customer Cooperation

The customer shall ensure that the document images submitted for verification meet the technical minimum requirements documented by Widas ID.
